

Novosibirsk State University announces Master Programmes in Applied Mathematics and Statistics (MPAMS)

These are 2-year programmes taught in English at the Master level that will start in October 2018. They are aimed at training in a number of areas of modern mathematics and statistics, and in their applications. At the end of the studies, students are awarded a Master Degree from Novosibirsk State University, with an approval by the Russian Ministry of Science and Education.

- Three programmes: Numerical Statistical Modelling, Inverse and Ill-Posed Problems: Theory, Numerics and Applications, and Discrete Mathematics and Combinatorial Optimization, with applications in actuarial science, information security, and transport logistics. The list of programmes may be expanded, see the Applied Mathematics and Statistics website for updates.
- Research-Oriented Programmes: half of the time is devoted to a research project at one of institutes of the Russian Academy of Sciences. A Master Dissertation completes the 2nd year of studies.
- Lecture courses and research supervision are provided by professors of the Novosibirsk State University and leading researchers from institutes of the Russian Academy of Sciences.
